

Release report

Pricing Tables 1.0.1 | Released October 11, 2026

Product selected and source

The existing public Pricing Tables product has an Add to cart control at a \$39 sale price. WooCommerce product 271 originally pointed to the 1.0.0 ZIP. The local backup copy of that named ZIP has the same SHA-256 as the separately retained complete-release ZIP:

4432e3bf3af3c0f61fefc87b381c710d5e43645547cd28c2fcccfd05c93b47c.

The live download URL was verified in the product editor. A fresh direct download did not complete in the browser, so byte identity with the current remote file is not independently established. The original package is preserved; version 1.0.1 is derived from that retained 1.0.0 source.

Verified repairs

Invalid edits no longer remove the last valid published table. Locked password-protected tables no longer render through shortcodes. Saved previews receive the public stylesheet. Per-table permission checks, accessible feature inputs, number bounds, clipboard feedback and narrow-container styling are improved.

Test evidence

26 WordPress integration checks pass on WordPress 7.1.1 / PHP 8.4.25 with a local SQLite test database. Coverage includes save/publish, duplicate IDs, invalid input, script markup, unsafe links, permissions, invalid nonces, private/password/draft/Trash states, sale labels, deactivation/reactivation and restoration.

Browser checks: create and publish a two-plan table, edit and persist a price, inspect the saved preview, inspect public desktop rendering, and inspect a 390px mobile viewport with no horizontal overflow. The ZIP upgrade from 1.0.0 completed through the WordPress installer and retained existing tables. All 26 checks passed again against the installed ZIP. The test data is synthetic and the server is bound to localhost. Production customer data was not used.

What this release establishes

Supported sales description

A WordPress pricing-comparison display tool with editable plans, features, recommended badges, style controls, duplication and shortcode embedding. It is not a checkout, recurring-billing engine, AI, membership manager, tax calculator or automatic WooCommerce-price synchronizer.

Included release files

Installable plugin ZIP; printable customer guide; readme/quick start; GPL license; privacy/data-handling notice; changelog; source code; regression-test source and results; desktop/mobile evidence; original-package reference and checksums.

Verification limits

These tests are evidence for the stated environment, not a guarantee for every theme, hosting setup or plugin combination. MySQL/MariaDB, WordPress 6.5, PHP 8.2, multisite, page builders, purchase/payment processing and third-party marketplace ingestion were not tested in this pass. The plugin retains its original WordPress 6.5/PHP 8.2 minimum metadata; the customer guide identifies the tested versions.

Hostinger handoff

Provide Hostinger with the installable ZIP, source, license, customer guide and this report. Obtain their actual distribution requirements, update mechanism, support responsibilities, revenue terms and review decision directly. This package does not establish a Hostinger partnership, marketplace acceptance, security certification or permission to use their trademarks.

Commercial terms

Preserve existing customer purchase terms. Do not create new refund, warranty, lifetime-update or response-time promises without the owner choosing them. The included privacy note describes only this plugin. Existing website terms remain separate from the software license.

Delivery record

The published product now uses the uploaded 1.0.1 ZIP in its existing download row. The saved file name and URL were verified, and the public page shows version, requirements and scope. Price and download limits were preserved. A complete purchase test has not been run; payment and customer entitlement delivery are not verified.
