

Reviews 1.0.3

October 11, 2026 | Published product 267

Source and scope

The public Forge Lumina Reviews product was listed at \$59 sale / \$79 regular and its download referenced Reviews 1.0.2. Two retained 1.0.2 ZIP copies matched SHA-256 4a22d1be80b7b273b17cc4f99ee0b5235f7c0a229d66f11209b1ddbfd5c56486. Version 1.0.3 is based on that retained source. The previous protected live download was identified in the editor; its bytes were not independently downloaded for comparison.

Repairs made

Public cards now refuse password-locked, unconsented or privacy-erased reviews, even when status is changed outside the normal workflow. Privacy export and erasure include Private and Scheduled reviews. Text-only submissions no longer require private photo storage. Upload errors with an empty temporary filename are reported rather than silently dropping the photo.

Verification

27 real WordPress integration checks passed using synthetic data. Coverage includes pending/approved visibility, private identity, password/consent/erasure guards, private-status export and erasure, unrelated-record preservation, no-photo intake, private storage boundary, signed math challenges, JPG/PNG/WebP processing, approval promotion, photo erasure, upload failure, deactivation/reactivation, REST exclusion and anonymous permissions.

Browser test: submitted a review with three photos, observed Pending status, approved it, saved a Verified Customer badge and business reply, and confirmed three public images with no private name/email. The local browser fixture disabled the math challenge; signed-challenge acceptance and rejection were checked separately in PHP. Synthetic notification email was captured locally instead of sent.

Distribution and operations

What the product does

Collects and moderates testimonials on the customer's own WordPress site. A Verified Customer badge is manually set by an administrator. No automatic purchase matching, external-review import, AI service or legal compliance certification is included.

Documentation and source

Installable ZIP contains editable PHP/JS/CSS source, full GPL license, customer guide, privacy notes, changelog and setup instructions. The customer guide and this report are intended to be linked from the published product page. The owner handoff includes test source, results, package checksums and screenshots.

Verification limits

Tested on WordPress 7.1.1 / PHP 8.4.25 / SQLite with GD and Twenty Twenty-Five. This is not a full compatibility matrix or independent security audit. MySQL/MariaDB, minimum WordPress/PHP versions, all hosting storage layouts, multisite, accessibility conformance, real SMTP delivery, paid checkout and customer download entitlements were not verified. Purchase-to-download testing is deferred at the owner's request.

Operating requirements

Use a suitable private photo directory outside all publicly served paths and include it in backups. Verify WordPress cron, SMTP delivery and cache purging on the target host. Approved photo URLs are public; deleting a review card alone does not recall previously downloaded images. Privacy erasure removes the plugin's associated files but not external copies.

Commercial and legal boundaries

GPL-2.0-or-later governs the software code. Existing website purchase, refund and support policies remain separate; this release creates no new contract, warranty or lifetime service promise. This report does not establish Hostinger marketplace acceptance or partnership terms.

Release record

Version 1.0.3 replaces the existing product download only after package checks. The final website verification record states the saved download and document URLs. Retain the original 1.0.2 package and backup for recovery.
